Congress of the United States House of Representatives Washington, DC 20515-4403

Project Name: Draper City Culinary Waterline Transmission and Distribution Redundancy and Upgrades

Recipient: Draper City

Address: 1020 E. Pioneer Rd, Draper, UT 84020

Amount Requested: \$3,500,000

Project Explanation: The funding would be used to replace and fortify the single waterline operated by Draper City that provides culinary water to over 1700 residences in the Suncrest neighborhood of Draper, which sits at the top of a mountain approximately 1800 feet in elevation above the valley floor. The project is an appropriate use of taxpayer funds because it will provide a new redundant waterline and upgrades to existing water infrastructure to ensure a consistent source of culinary water to the Suncrest community. The redundant waterline project will require the construction of two new pump stations and a new transmission line. These upgrades are critical to the operation of the water system in Suncrest -- both for ensuring a continuous supply of culinary water to residents and to make sure there is adequate water for fire suppression in the event of a failure in the existing water supply system.

Congress of the United States House of Representatives

Washington, DC 20515-4403

May 2, 2025

The Honorable Tom Cole Chair Committee on Appropriations U.S. House of Representatives Washington, D.C. 20515 The Honorable Rosa DeLauro Ranking Member Committee on Appropriations U.S. House of Representatives Washington, D.C. 20515

Dear Chairman Cole and Ranking Member DeLauro:

I am requesting funding for the Draper City Culinary Waterline Transmission and Distribution Redundancy and Upgrades in Fiscal Year 2026. The entity to receive funding for this project is Draper City, located at 1020 E. Pioneer Road, Draper, Utah 84020. The funding would be used to replace and fortify the single waterline operated by Draper City that provides culinary water to over 1700 residences in the Suncrest neighborhood of Draper, which sits at the top of a mountain approximately 1800 feet in elevation above the valley floor. The project is an appropriate use of taxpayer funds because it will provide a new redundant waterline and upgrades to existing water infrastructure to ensure a consistent source of culinary water to the Suncrest community. The redundant waterline project will require the construction of two new pump stations and a new transmission line. These upgrades are critical to the operation of the water system in Suncrest --both for ensuring a continuous supply of culinary water to residents and to make sure there is adequate water for fire suppression in the event of a failure in the existing water supply system.

The project has a federal nexus because the funding provided is for purposes authorized by Section 1452 of the Safe Drinking Water Act and the list of project options is found within 40 CFR 35.3520(b)(2)(i-vi).

I certify that I have no financial interest in this project, and neither does anyone in my immediate family.

Sincerely,

Mike Kennedy, M.D. (UT-03)

Member of Congress
